

Safety confirmation is important

during disasters!!

~To meet someone important to you again~

◆What's safety confirmation?

It means to confirm “survival status” or “whereabouts” of someone during disasters. It will become an important clue to search for or to identify a missing person when there is someone whose safety is unknown.

◆Who are persons to be targeted for safety confirmation?

They are local residents and persons staying the local community by chance at that time. It is important for disaster recovery that safety confirmation of all the people can be available.

◆From safety confirmation to the establishment of evacuation sites

Safety confirmation will be conducted for all the people immediately after a disaster occurs.

★ “My family's safety confirmation card” made by Yaizu city is a safety confirmation tool.

Information of “My family's safety confirmation card” will be utilized at initial response such as rescue or firefighting operations, safety confirmation, etc. after a disaster. If there are people having lost their living places, we will open evacuation shelters and start accommodation of refugees. At reception of the evacuation shelters, accommodation procedures of refugees will be done once again.
